Section 508 (Revised — incorporates WCAG 2.0 A/AA)

NON-CONFORMANT

22 findings across 6 success criteria

1 critical · 20 serious

Reading this report. Findings shown are the **machine-decidable (Tier A/B)** failures, cross-verified across three independent engines. A result of "no automated failures" is **not** a finding of conformance: automated testing reliably covers only ~30–40% of WCAG success criteria. Criteria requiring human judgment (Tier C — caption accuracy, meaningful sequence, full keyboard operability, etc.) are evaluated in the human-in-the-loop pass and are not represented above. Every finding below is backed by preserved, hash-sealed evidence (see Evidence integrity).

Limitations & legal note

Automated engines cannot decide every WCAG criterion; this report documents what is machine-verifiable plus preserves evidence for the human-evaluated criteria. WCAG→ADA mapping (28 CFR Part 36; DOJ 2024 Title II rule adopting WCAG

2.1 AA; *Robles v. Domino's*, 9th Cir. 2019) is provided for orientation and **must be confirmed by counsel**. This tool supports, and does not replace, an accessibility expert declaration.
